SEC-03 - Data Security and Residency Policy

Status: SUPERSEDED

Effective: 2026-03-01 **Superseded by:** SEC-04 effective 2026-08-01

Historical document retained for audit and evaluation. Do not use SEC-03 to approve new production changes.

1. Historical data classes

Class	Historical rule
Public	No special residency control.
Internal	Default region ap-south-1.
EU Customer Documents	Encryption required; ap-south-1 was accepted when encrypted.

2. Historical database rule

Environment	Historical database access rule
Production	RDS public access was disallowed.
Staging	Temporary public access was possible with a documented partner exception.

3. Historical encryption rule

Encryption at rest was required for customer documents. The historical policy did not impose the current Restricted-EU processing-region rule introduced by SEC-04.

Supersession note: SEC-04 changed the Restricted-EU residency requirement and is the controlling policy for decisions effective on or after 2026-08-01.

Footnote 1: This document remains intentionally available so an agent must distinguish historical evidence from current policy.
